elevated temperature data of alloy steel produced indigenously against ASME or BS or EN Code, these grades of steel may be accepted and long time elevated temperature properties/ maximum allowable stress values given in ASME or BS or EN Code, as the case may be, may be used for the purpose of design, Provided that

(I) a certificate is furnished by the producer to the steel to the effect that the steel has been manufactured strictly in accordance with the technical requirements of the ASME or BS or EN Code to assure that the creep rupture requirements are complied with.

(II) the Steel Maker furnishes the necessary certificate that the steel conforms to the chemical analysis, room and elevated temperature mechanical properties given in ASME or BS or EN Code as the case may be.

However, the forging to be used in valves should be tested at 550^0 C for 1000 hours. The stress to cause rupture in 1000 hours at above temperatures may be taken from the master curve corresponding to-20% line. At this stress, a minimum rupture life of 1000 hours is expected. Both the samples should pass 1000 hour tests at the above stress and temperature. These samples may be selected at random by the Chief Inspector of Boilers of the respective State. The samples could be in the form of semi-finished products, say, forged bars of about 25 mm^2 which will undergo heat treatment as prescribed by the relevant specifications."
